AT DTP-FILES WHAT HAS TO BE HEEDED?

FONTS: Used fonts need to supplied, embedded or autotraced.
We are able to work with all kinds of Fonts. (Type 1, TrueType, OpenType).
For Type 1 please send us monitor- and printfonts!
Please zip all your fonts datas.

PICTURES: Used pictures should be embedded, but we also accept supplied image files.

In our prepress following data formats can be edit:
Tiff (also LZW),
EPS (ASCII, binary- or JPG-encoded),
JPEG,
other data formats on request

Please pay attention for the resolution of your datas of at least 300 dpi.
The file names may contain no special characters!

COLOR MANAGEMENT: Standard is currently printing to Fogra 39L.
Output-independent data (e.g., ECI-RGB) or data of other printing conditions we will convert with a gmg ColorServer.

Print data according to Fogra 51 and Fogra 52 (with OBA) require a special arrangement for the evaluation!

WHAT DOES OUR QUALITY MANAGEMENT OFFER?

COLOR TARGET QUALITY: You can provide binding proofs or we supply color-binding proofs for approval to you. Process colors and standard Pantone colors will be displayed in correct color gammut. For special colors, we use also certified references or color compartments.

CONTENT OF THE DESIRED QUALITY: You can approve the print artwork in the WebCenter. Alternatively, you can also provide binding printouts for verification.

FINISHES: Please attach special finishes (e.g. partial lacquers, hot foil sembossing, embossing, etc.) as layer to the data.

REPEATABILITY: The approved file in the WebCenter is an image of the archived print data. With reference to our product or order number, we guarantee you accurate reprints.

IMPORTANT:

It is essential that the contents and color samples or color references be included with the data supplied!

Your customer sales contact will be happy to advise you!
